Vehicle Routing to Minimize Time-Dependent Emissions in Urban Areas

Jan Fabian Ehmke, Ann Melissa Campbell, Barrett W. Thomas

PII: S0377-2217(15)01083-8
DOI: [10.1016/j.ejor.2015.11.034](https://doi.org/10.1016/j.ejor.2015.11.034)
Reference: EOR 13385

To appear in: *European Journal of Operational Research*

Received date: 6 February 2015
Revised date: 14 October 2015
Accepted date: 27 November 2015

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We investigate the impact of varying travel speeds and loads on emissions
- We propose a way of keeping the load and time-dependent VRP tractable
- We analyze how the structure of routes changes following varying speeds and loads
- Comparison with traditional objectives shows the trade-off between emissions and costs
