The bipartite quadratic assignment problem and extensions

Abraham P. Punnen, Yang Wang

PII: S0377-2217(15)00913-3
DOI: [10.1016/j.ejor.2015.10.006](https://doi.org/10.1016/j.ejor.2015.10.006)
Reference: EOR 13290

To appear in: *European Journal of Operational Research*

Received date: 23 July 2014
Revised date: 23 September 2015
Accepted date: 4 October 2015

Please cite this article as: Abraham P. Punnen, Yang Wang, The bipartite quadratic assignment problem and extensions, *European Journal of Operational Research* (2015), doi: [10.1016/j.ejor.2015.10.006](https://doi.org/10.1016/j.ejor.2015.10.006)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We introduced a new model that subsumes the well-known quadratic assignment problem.
- We developed meta-heuristic algorithms using three neighborhoods and their unions.
- Experimental analysis disclosed the superiority of hybrid algorithms.
- Complexity results and polynomially solvable special cases are also established.
