This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- 1) We want to optimize a CBM policy when the maintenance model parameters are uncertain.
- 2) The uncertainty is Monte-Carlo propagated onto the performance indicators (unavailability and cost).
- 3) The objective functions are Cumulative Distribution Functions.
- 4) An extension of Multi-Objective Genetic Algorithms is proposed to optimize maintenance.
- 5) The technique is compared to a CVar based MOGA approach.
