This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- We consider identical parallel machine scheduling to minimize total tardiness.
- Jobs can only be delivered at exogenously given fixed delivery dates.
- Mathematical programming and a branch-and-bound algorithm solve small problems.
- A tabu search and a hybrid genetic algorithm are developed for larger problems.
