Shape Matters: Modelling, Calibrating & Validating Pedestrian Movement Considering Groups

Luca Crociani, Yiping Zeng, Giuseppe Vizzari, Stefania Bandini

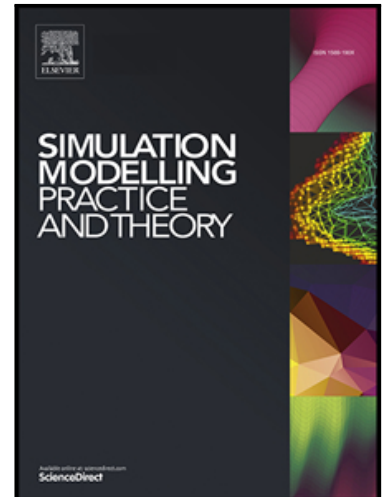

PII: S1569-190X(18)30084-4
DOI: [10.1016/j.simpat.2018.06.001](https://doi.org/10.1016/j.simpat.2018.06.001)
Reference: SIMPAT 1818

To appear in: *Simulation Modelling Practice and Theory*

Received date: 8 February 2018
Revised date: 4 June 2018
Accepted date: 6 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A model that accounts of the shape of groups in pedestrian simulation
- Extensive calibration on parameters governing the model for pedestrian groups
- Validation with benchmark tests about the fundamental diagram of pedestrian traffic
- Qualitative evaluation of the simulated behaviour of pedestrians
