Title: A Modified Water Cycle Algorithm for Long-term Multi-Reservoir Optimization

Authors: Yuni Xu, Yadong Mei

PII: S1568-4946(18)30364-8
DOI: <https://doi.org/10.1016/j.asoc.2018.06.031>
Reference: ASOC 4946

To appear in: *Applied Soft Computing*

Received date: 11-1-2018
Revised date: 22-6-2018
Accepted date: 22-6-2018

Please cite this article as: Xu Y, Mei Y, A Modified Water Cycle Algorithm for Long-term Multi-Reservoir Optimization, *Applied Soft Computing Journal* (2018), <https://doi.org/10.1016/j.asoc.2018.06.031>

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A Modified Water Cycle Algorithm for Long-term Multi-Reservoir Optimization

Key findings:

- (1) DC-WCA is faster in finding better solutions for benchmark problems, compared to the other reported optimizers.
- (2) The performance of DC-WCA is highly competitive with the other reported optimizers for the multi-reservoir optimization.
