Title: A Hybrid Dermoscopy Images Segmentation Approach Based on Neutrosophic Clustering and Histogram Estimation

Authors: Amira S. Ashour, Yanhui Guo, Enver Kucukkulahli, Pakize Erdogmus, Kemal Polat

PII: S1568-4946(18)30264-3
DOI: <https://doi.org/10.1016/j.asoc.2018.05.003>
Reference: ASOC 4869

To appear in: *Applied Soft Computing*

Received date: 26-1-2018
Revised date: 2-4-2018
Accepted date: 2-5-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

A Hybrid Dermoscopy Images Segmentation Approach Based on Neutrosophic Clustering and Histogram Estimation

Highlights

- A novel skin lesion detection approach, called HBCENCM, is proposed.
- Histogram-based cluster estimation has been used to find the cluster numbers in image.
- An NCM algorithm is employed to group the pixels in the dermoscopy images.
