This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

- \* We predict employee turnover using Supervised Self-Organizing Maps (SSOM).
- \* We used a combination of performance and personality traits as predictor variables.
- \* When comparing performance of the classifier with and without personality traits, we found that personality traits help to improve significantly the performance of the classifier.
- \* Using capabilities of SSOM, we showed that it is possible to find some personality profiles of agents that make them more or less susceptible to withdraw or to stay in the organization.
