Title: Binary Artificial Algae Algorithm for Multidimensional Knapsack Problems

Author: Xuedong Zhang Changzhi Wu Jing Li Xiangyu Wang Zhijing Yang Jae-Myung Lee Kwang-Hyo Jung

PII: S1568-4946(16)30078-3
DOI: http://dx.doi.org/doi:10.1016/j.asoc.2016.02.027
Reference: ASOC 3486

To appear in: *Applied Soft Computing*

Received date: 19-8-2015
Revised date: 23-1-2016
Accepted date: 15-2-2016

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A novel binary artificial algae algorithm is proposed for solving MKPs.
- The method is composed of discrete process, repair operators and elite local search.
- The results show the proposed method outperforms many existing algorithms.
