This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- An efficient epistemic uncertainty analysis method using evidence theory is proposed.
- Johnson p-boxes are constructed to equivalently represent evidence variables.
- Uncertainty analysis using evidence theory is converted to two times of probabilistic uncertainty analysis.
- The computational issue resulted from the discrete property of evidence variables is solved to a large extent.
