This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new stabilized finite element method for variable-coefficient elliptic variational inequalities
- Optimal a priori error estimates and novel a posteriori error estimators
- Straightforward implementation as a Nitsche-type method
- Superiority over classical penalty methods as seen in better capturing of the free boundaries
