This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights (for review)

- Multifidelity importance sampling (MFIS) combines, instead of replaces, a high-fidelity model with a surrogate model
- Biasing distribution is derived with surrogate model and estimate with high-fidelity model
- The MFIS estimator is unbiased, even in the absence of error bounds and error estimators for the surrogate model
