This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A gradient algorithm is derived from a hyperbolic diffusion scheme.
- The derived implicit Green-Gauss method is exact for linear functions on arbitrary grids.
- Fourth-order accuracy is achieved on rectangular-cell grids through the boundary.
- Excellent accuracy demonstrated for highly-curved thin grids.
- Per-iteration cost is comparable to that of a least-squares method.
- Discontinuity capturing with smoothed gradients.
