This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- New well posed and numerically cheap high order transmission conditions for inhomogeneous media.
- Large full matrices arising from the exact radiation condition are compressed via ACA.
- Parallelized numerical code.
- Very accurate numerical results obtained on electrically large objects involving up to 160 million unknowns with a reasonable numerical complexity.
