This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A Finite-Volume method for compressible flows in flexible pipelines is presented.
- A Finite-Volume treatment of the junction coupling of several pipes is also tackled.
- ALE extension of the method is coupled with beam finite elements for FSI.
- Assessment on problems involving changes of area, shock waves, networks is performed.
- Good agreement with experiments is obtained for a FSI application.
