Iteration Acceleration for Distributed Learning Systems

Junxiong Wang, Hongzhi Wang, Chenxu Zhao, Jianzhong Li,
Hong Gao

PII: S0167-8191(18)30002-4
DOI: [10.1016/j.parco.2018.01.001](https://doi.org/10.1016/j.parco.2018.01.001)
Reference: PARCO 2429

To appear in: *Parallel Computing*

Received date: 19 February 2017
Revised date: 4 January 2018
Accepted date: 5 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A hybrid approach of synchronization and asynchronization for distributed iterative machine learning algorithms to handle the block caused by machine failure.
- The relationship between accuracy and abandon rate is formulated as inequations.
- Experimental results show that the proposed algorithm improves speedup significantly.
