This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A comprehensive survey of biometric gait recognition based on vision, underfoot pressure, accelerometry, and audio sensory modalities.
- A review of the factors that impact gait recognition performance (e.g., walking speed, clothing, footwear, etc.) and the influence of time lapse.
- A discussion on the future of gait biometrics and the challenges and open problems that are yet to be addressed in the field.
