This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A new Belief Jensen-Shannon (BJS) divergence is devised in this paper.
- BJS is proposed to measure the discrepancy and conflict degree between evidences.
- A new method is proposed for multi-sensor data fusion.
- The method is based on belief divergence measure of evidences and belief entropy.
- The method outperforms the related works with better effectiveness.
