This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A novel taxonomy for ensemble methods in multi-label classification is proposed.
- A comparison of the state-of-the-art in ensembles of multi-label classifiers.
- An insight about how problem features influence the performance of methods.
- Suggestions to choose the algorithm that fits best to a given problem.
