This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Weighted aggregation models are proposed for sentiment classification.
- There is a low consensus for detecting neutral polarities.
- Neutrality is key for improving classification results. It is detected by weighted aggregation models.
- Aggregation models outperform single models in sentiment classification.
