This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- An effective affinity learning method is proposed;
- This approach utilizes the self-expressive model (L1 norm) as the initial affinities, and re-evaluate them by a diffusion process;
- Learning affinity considering both local geometry and global data manifold;
- Extensive experiments on various data have demonstrated the effectiveness of the proposed method.
