This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A new method to fit parabolic curves is presented.
- The method is fast and robust to noisy observations due to the use of absolute error minimization.
- Stability is further improved by normalization of the directrix vector.
- Our approach outperforms state of the art competitors in both synthetic and real datasets.
