This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A method for sparse feature extraction of exponential family data is presented
- It extends the previous method of Generalised Principal Component Analysis
- Applications to text data are performed using a simple Poisson model
- Superior perfomance to current state of art methodology is shown on synthetic data
- Performance on a dataset from healthcare is on par with state of art methodology
