This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Subspace clustering is solved from nonlinear orthogonal NMF perspective.
- General kernel-based multiplicative orthogonal updates for NMF are derived.
- Explicit orthogonality constraint excludes the usual k-means clustering step.
- The local geometric structure is included via fully connected graph regularization.
- A connection between spectral clustering and kernel orthogonal NMF is established.
