Accepted Manuscript

Data-independent Random Projections from the feature-space of the Homogeneous Polynomial Kernel

Daniel López-Sánchez, Angélica González Arrieta,
Juan M. Corchado

PII: S0031-3203(18)30167-5
DOI: 10.1016/j.patcog.2018.05.003
Reference: PR 6547

To appear in: *Pattern Recognition*

Received date: 4 July 2017
Revised date: 9 March 2018
Accepted date: 3 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- A novel kernel-based extension of the original Random Projection method is presented
- The proposed method preserves distances form the feature space of polynomial kernels
- This method can be used to efficiently boost the accuracy of linear classifiers
