Deep Feature Learning via Structured Graph Laplacian Embedding
for Person Re-Identification

De Cheng, Yihong Gong, Xiaojun Chang, Weiwei Shi,
Alexander Hauptmann, Nanning Zheng

PII: S0031-3203(18)30171-7
DOI: [10.1016/j.patcog.2018.05.007](https://doi.org/10.1016/j.patcog.2018.05.007)
Reference: PR 6551

To appear in: *Pattern Recognition*

Received date: 21 June 2017
Revised date: 12 April 2018
Accepted date: 5 May 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- This paper is the first to formulate the structured distance relationships into the graph Laplacian form for deep feature learning.
- Joint learning method is used in the framework to learn discriminative features.
- The results show clear improvement on public benchmark datasets and some are the state-of-the-art.
