This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A method to efficiently reconstruct 3D indoor scene from a single image is presented.
- Our method not only can estimate room layout of scene, but also can reconstruct excellent details of scene. The method can cope with clutter without prior training, making it practical and efficient for a navigating robot.
