This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- We demonstrate that the connectivity cues can be effectively used for robust visual tracking.
- We show that the BMR scheme can be approximated as an explicit feature map of the intersection kernel.
- Our tracking algorithm based on the BMR scheme performs favorably on the large benchmark dataset with 50 challenging videos.
