Structured Dynamic Time Warping for Continuous Hand Trajectory
Gesture Recognition

Jingren Tang, Hong Cheng, Yang Zhao, Hongliang Guo

PII: S0031-3203(18)30062-1
DOI: [10.1016/j.patcog.2018.02.011](https://doi.org/10.1016/j.patcog.2018.02.011)
Reference: PR 6458

To appear in: *Pattern Recognition*

Received date: 3 August 2017
Revised date: 31 January 2018
Accepted date: 10 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We use the positions of the corner points in arbitrary trajectories as a kind of structured information, and assign different weights to feature sequences based on the structure.
- We propose a natural continuous trajectory segmentation approach, which combines templates and velocity to detect the beginning and ending points in hand gesture trajectories.
- We combine position and orientation features with DTW to make trajectories more discriminative.
