Class-specific mutual information variation for feature selection

Wanfu Gao, Liang Hu, Ping Zhang

PII: S0031-3203(18)30073-6
DOI: [10.1016/j.patcog.2018.02.020](https://doi.org/10.1016/j.patcog.2018.02.020)
Reference: PR 6467

To appear in: *Pattern Recognition*

Received date: 28 June 2017
Revised date: 5 February 2018
Accepted date: 18 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A novel feature selection method is proposed based on information theory.
- A new term calculating dynamic information of selected features is proposed.
- We redefine the feature relevancy.
- We implement experiments on 20 benchmark data sets.
- Our method outperforms seven competing methods in terms of accuracy.
