Super-Resolution for Biometrics: A Comprehensive Survey

Kien Nguyen, Clinton Fookes, Sridha Sridharan, Massimo Tistarelli,
Mark Nixon

PII: S0031-3203(18)30004-9
DOI: [10.1016/j.patcog.2018.01.002](https://doi.org/10.1016/j.patcog.2018.01.002)
Reference: PR 6411

To appear in: *Pattern Recognition*

Received date: 20 April 2017
Revised date: 18 December 2017
Accepted date: 7 January 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Discuss the significance of super-resolution in the context of biometrics and how it is different from the general super-resolution.
- Present a background knowledge in general super-resolution approaches.
- Provide a comprehensive review of existing super-resolution approaches for biometric modalities, including face (2D and 3D), iris, gait and latent prints (fingerprint and palmprint) and other emerging modalities.
- Highlight and discuss current challenges and recommendations for future research in Super-resolution for biometrics.
