This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We address combining imprecise classifiers in the framework of imprecise probabilities
- Classifier outputs are probability intervals, which are large for irrelevant classifiers
- The combination consists in computing probabilities consistent with the intervals
- This approach is particularly interesting when combining few classifiers
