This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- Introduce an accurate and efficient method for ground-to-aerial model alignment.
- Use the ground model directly instead of each single ground image for view synthesis.
- Propose 3 key steps for model alignment, including image selection, synthesis, and matching.
- Design quantitative metrics for methods comparison and parameter settings evaluation.
