This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- We present a new metric learning approach for facial expression recognition in videos.
- Our approach combines both audio and visual features and achieves better facial expression recognition performance.
- Experimental results clearly show the advantages of the proposed approach over the state-of-the-arts.
