Learning to Refine depth for Robust Stereo Estimation

Feiyang Cheng, Xuming He, Hong Zhang

PII: S0031-3203(17)30298-4  
DOI: [10.1016/j.patcog.2017.07.027](https://doi.org/10.1016/j.patcog.2017.07.027)  
Reference: PR 6230

To appear in: *Pattern Recognition*

Received date: 11 March 2017  
Revised date: 18 July 2017  
Accepted date: 26 July 2017

Please cite this article as: Feiyang Cheng, Xuming He, Hong Zhang, Learning to Refine depth for Robust Stereo Estimation, *Pattern Recognition* (2017), doi: [10.1016/j.patcog.2017.07.027](https://doi.org/10.1016/j.patcog.2017.07.027)

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A multi-branch neural network for disparity estimation is proposed.
- Initial disparity map, confidence measures and disparity gradients can be predicted simultaneously.
- A continuous MRF is proposed to employ the three channel information to refine initial disparity maps.
