This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Wearable camera videos suffer from informationless intervals of target loss.
- We use spatial pattern to help associate the targets over an informationless interval.
- A new dataset containing 30 wearable-camera videos is proposed.
