Improving multiclass classification by deep networks using DAGSVM and Triplet Loss

Nakul Agarwal, Vineeth N Balasubramanian, C.V. Jawahar

PII: S0167-8655(18)30274-5
DOI: [10.1016/j.patrec.2018.06.034](https://doi.org/10.1016/j.patrec.2018.06.034)
Reference: PATREC 7241

To appear in: *Pattern Recognition Letters*

Received date: 31 August 2017
Revised date: 4 June 2018
Accepted date: 24 June 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- A multiclass classification method is proposed to improve classification accuracy of existing deep networks.
- Softmax layer is replaced by binary classifiers arranged in a DAG structure.
- Triplet loss is used to further improve performance of the binary classifiers.
