This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A simple non-rigid structure from motion scheme based on a local-rigidity prior is proposed.
- The Huber loss is incorporated in the proposed cost to handle non-rigid local parts.
- Each subproblem of the optimization process has a simple closed-form solution.
- The proposed method provides the state-of-the-art performance for well-known surface data sets.
