Recognizing irregular entities in biomedical text via deep neural networks

Fei Li, Meishan Zhang, Bo Tian, Bo Chen, Guohong Fu, Donghong Ji

PII: S0167-8655(17)30215-5
DOI: [10.1016/j.patrec.2017.06.009](https://doi.org/10.1016/j.patrec.2017.06.009)
Reference: PATREC 6848

To appear in: *Pattern Recognition Letters*

Received date: 8 January 2017
Revised date: 21 May 2017
Accepted date: 12 June 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- Novel models are proposed for recognizing discontinuous and overlapped entities.
- The models are based on bidirectional LSTMs and CRFs.
- The models require little feature engineering.
- Results are competitive compared with state-of-the-art systems.
