Hough Transform for Real-Time Plane Detection in Depth Images

Eduardo Vera, Djalma Lucio, Leandro A.F. Fernandes, Luiz Velho

PII: S0167-8655(17)30473-7
DOI: [10.1016/j.patrec.2017.12.027](https://doi.org/10.1016/j.patrec.2017.12.027)
Reference: PATREC 7043

To appear in: *Pattern Recognition Letters*

Received date: 26 April 2017
Revised date: 17 November 2017
Accepted date: 31 December 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- An efficient Kernel-Based Hough Transform for detecting planes in depth images
- Summed Area Tables and an implicit quadtree clusterize coplanar points in 2.5-D
- An efficient voting scheme is performed using a trivariate-Gaussian distribution per cluster
- An efficient gradient climbing strategy retrieves the peaks of votes in the accumulator map
- The asymptotic time complexity of our approach is $O(n)$
