This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights

- The geometric graphs miners found on the literature are very inefficient.
- GeoSuM is able to accurately find frequent geometric subgraphs.
- The used growth approaches greatly reduces the search space.
- The geometric tolerance can be reached by using a geometric similarity function.
- The are many practical applications for the geometric graphs miners.
