Stabilization of Unstable Equilibrium Point of Rotary Inverted Pendulum using Fractional Controller

Prakash Dwivedi, Sandeep Pandey, Anjali S Junghare

PII: S0016-0032(17)30482-9
DOI: [10.1016/j.jfranklin.2017.09.013](https://doi.org/10.1016/j.jfranklin.2017.09.013)
Reference: FI 3149

To appear in: *Journal of the Franklin Institute*

Received date: 28 October 2016
Revised date: 5 September 2017
Accepted date: 19 September 2017

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Highlights

- 2-Loop fractional PID controller is proposed for rotary type single inverted pendulum.
- A new tuning method is proposed for fractional parameters using frequency response techniques.
- Phase trajectories are defined the nonlinear performance and robust behavior of plant.
