

## Accepted Manuscript

Single Image Super-resolution Using Collaborative Representation  
and Non-local Self-Similarity

Kan Chang, Pak Lun Kevin Ding, Baoxin Li

PII: S0165-1684(18)30087-2  
DOI: [10.1016/j.sigpro.2018.02.031](https://doi.org/10.1016/j.sigpro.2018.02.031)  
Reference: SIGPRO 6755

To appear in: *Signal Processing*

Received date: 6 September 2017  
Revised date: 3 December 2017  
Accepted date: 26 February 2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

**Highlights**

- A novel regularization term named CRR is proposed to exploit the external prior.
- The learning process of CRR is independent of the degradation model.
- A joint regularization term combining the external and internal priors is designed.
- An effective iterative algorithm is developed to solve the optimization problem.
- The proposed method is superior to many state-of-the-arts SR methods.
