This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Highlights:

- Eye tracking technology is an efficient tool for salient objects detection.
- Combining the background superpixels with low saliency values can upgrade the model.
- The combination of bottom-up and top-down models gives the best detection results.
