This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

ACCEPTED MANUSCRIPT

Multiparameter analysis of activated sludge inhibition by nickel, cadmium, and cobalt.

Gabriel R. Hernandez-Martinez¹, Daniela Ortiz-Alvarez^{1,2}, Michael Perez-Roa^{1,2}, Nestor Andres Urbina-Suarez² and Frederic Thalasso^{1*}

Highlights

- Activated sludge inhibition by Ni, Cd, and Co was quantified by microrespirometry.
- Several kinetic and stoichiometric parameters were determined.
- Heavy metals showed a complex uncompetitive inhibition.
- Inhibition depended on the inhibitor, substrate, and biomass concentrations.
- Inhibition also depended on the exposure time.
