Title: Multi-Variable Regression Analysis for the Solid Waste Generation in The State of Kuwait

Authors: S.M. Al-Salem, A. Al-Nasser, A.T. Al-Dhafeeri

PII: S0957-5820(18)30564-0
DOI: <https://doi.org/10.1016/j.psep.2018.07.017>
Reference: PSEP 1461

To appear in: *Process Safety and Environment Protection*

Received date: 30-4-2018
Revised date: 7-7-2018
Accepted date: 20-7-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Multi-Variable Regression Analysis for the Solid Waste Generation in The State of Kuwait

Graphical abstract

Highlights:

- In this work, multi-variable regression models were developed for the study of various solid waste components on a country level.
- The developed regression models can predict individual waste components with high accuracy, which solves future problems in waste mitigation and strategy development.
- High accuracy was also noted between predicted and input parameters for the models developed using this approach.
