Title: Baker's Yeast Wastewater Advanced Treatment Using Ozonation and Membrane Process for Irrigation Reuse

Authors: Gökhan Balcıoğlu, Z. Beril Gönder

PII: S0957-5820(18)30114-9
DOI: <https://doi.org/10.1016/j.psep.2018.04.006>
Reference: PSEP 1349

To appear in: *Process Safety and Environment Protection*

Received date: 7-2-2018
Revised date: 30-3-2018
Accepted date: 9-4-2018

This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Baker's Yeast Wastewater Advanced Treatment Using Ozonation and Membrane Process for Irrigation Reuse

Highlights

- Baker's yeast wastewater was treated using combined ozonation with membrane process
- The effects of pH and temperature were investigated for ozonation process
- 96–98% color and 56% COD removals were obtained with ozonation at pH 7.5 and 25°C.
- Lower flux decline caused from membrane fouling was occurred for BW 30
- The treated wastewater met the criteria of class B for irrigation
