### Graphical Abstract

### Abstract

In the search for a low molecular weight organo gelator, sodium-4-oxo-4-((11-phenoxyundecyl)oxy)but-2-enoate (PUDMS) was designed and synthesized using phenol, 11-bromoundecanol, and maleic anhydride as starting materials. The maleate based amphiphile entrap hydrocarbon solvents like cyclohexane, hexane, and heptane in the
