This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

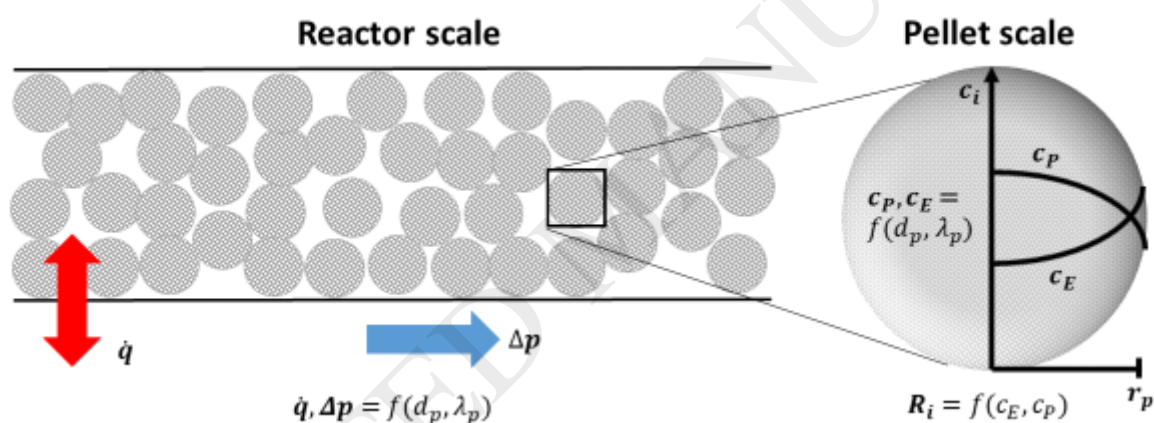

Tailored catalyst pellet specification for improved fixed-bed transport characteristics: A shortcut method for the model-based reactor design

Alexander Pietschak, Markus Kaiser, Hannsjörg Freund*

Graphical abstract

Highlights for the paper „Tailored catalyst specifications for improved fixed-bed transport characteristics: A shortcut method for model-based reactor design”:

- Reactor design approach including the pellet specifications as design variables
- General approach to derive analytical solutions of the catalyst balance equations
- Suitable for reaction networks and reaction kinetic models of different complexity
- Pellet consideration without heterogeneous models to reduce computational cost
