This is a PDF file of an unedited manuscript that has been accepted for publication. As a service to our customers we are providing this early version of the manuscript. The manuscript will undergo copyediting, typesetting, and review of the resulting proof before it is published in its final form. Please note that during the production process errors may be discovered which could affect the content, and all legal disclaimers that apply to the journal pertain.

Facile fabrication of gelatin/bentonite composite beads for tunable removal of anionic and cationic dyes

Graphical Abstract

Highlights

- The Gel–Bent was prepared by compacting gelatin and bentonite facilely.
- The beads offer ease of operation and fast separation compared with powder.
- The Gel–Bent could remove both anionic CR and cationic MB dyes.
- The adsorption property of Gel–Bent was adjusted just by changing the amount of bentonite.
